2026 outdoor cycling accessories edition

Practical e-bike accessory sourcing

OpenRyd helps buyers organize mixed-category e-bike and cycling accessory discussions before sample, bulk order and packaging decisions.

Built for Buyers

- Mixed-category wholesale planning across lights, mounts, bags, locks, tools and commuter safety accessories.
- Sample discussion and product specification checks before bulk order planning.
- OEM packaging conversations for logo labels, retail boxes, barcode needs and carton marks.
- Inquiry-first process: final price, MOQ, lead time and documentation are confirmed by exact product and buyer market.

Buyer Types

Bike shops, distributors, online sellers, private-label accessory brands and commercial programs.

Sales Channels

Retail shelves, marketplace listings, commuter accessory bundles and dealer starter assortments.

Quote Inputs

Category, quantity range, destination country, channel, sample need and packaging direction.

Core product categories

The current homepage promotes four practical product families plus curated kits and OEM packaging support.

Anti-Theft & Security

Trackers, locks and rider protection add-ons for commuter and retail bundle programs.

Smart Lights & Signals

Front lights, tail lights, signal accessories and visibility products for retail-ready assortments.

Phone Mounts & Cockpit

Phone mounts, holders, mirrors and cockpit add-ons for commuting, navigation and delivery riders.

Bags & Commuting Storage

Frame bags, top tube bags, handlebar bags and storage kits for daily riding programs.

Accessory kits that sell together

Kits are positioned for buyers who want a coherent retail bundle instead of sourcing one SKU at a time.

E-Bike Anti-Theft Kit

A ready-to-source security bundle for bike shops, online sellers and distributors. Public homepage positioning includes tracker, lock and alarm style security products. Exact components are confirmed by inquiry.

E-Bike Commuter Kit

A practical commuter bundle for daily riders: mounting, lighting and storage accessories packaged around common urban use cases. Final SKU mix is confirmed per buyer market.

Kit Program Notes

- Use kits to simplify marketplace listings and retail shelf planning.
- Request samples before confirming exact bundle composition.
- OEM packaging, barcode and insert needs should be scoped with the target channel.

Buyer discussion SKUs

These are public-site product directions. Treat exact specifications, compliance documents and packaging as inquiry-confirmed.

Model	Product Direction	Buyer Role
OR-HL-102	LED front bike light	Entry safety and commuter light range
OR-RL-108	USB rear warning tail light	Rear visibility and safety kit range
OR-LS-201	Front and rear light set	Starter accessory bundle for retail
OR-PM-210	CNC anti-shock phone mount	Cockpit accessory for navigation and delivery use
OR-BG-305	Waterproof phone frame bag	Top tube phone access and compact storage
OR-BG-318	Waterproof top tube bag	Daily tools, phone and essentials storage
OR-LK-510	Bike cable lock	Everyday anti-theft add-on for starter sets
OR-TK-616	16-in-1 repair tool kit	Checkout add-on and service counter accessory
OR-TK-628	Mini pump and bottle cage set	Bundle SKU for accessory assortments

Guardrail: do not publish unverified certifications, ratings, waterproof grades, warranty terms or market approvals in buyer materials.

Packaging and brand support

Use OEM packaging as a discussion module. Final options depend on product category, quantity, packaging format, label requirements and supplier capability.

Logo & Label

Logo labels, product marks, retail cards and basic brand presentation.

Retail Box

Box format, insert, barcode and listing-ready packaging discussion.

Carton Planning

Mixed SKU cartons, carton marks and shipping preparation details.

Sample Review

Check product, package direction and market fit before bulk order.

From product interest to quote-ready brief

The catalog should drive a buyer toward a useful RFQ, not over-promise specs before confirmation.

1

Choose product family

Select lights, mounts, bags, locks, tools, kits or OEM packaging.

2

Share buyer context

Country, sales channel, business type and target customer.

3

Define quantity range

Sample need, trial order range, expected SKU count and timeline.

4

Confirm specs and packaging

Exact product details, documents and packaging scope are reviewed.

5

Prepare quote

Pricing, MOQ, lead time and sample path are confirmed for the exact request.

Ready to build your e-bike accessory range?

Use this catalog to start a focused wholesale or OEM discussion. Final specifications, documents, price, MOQ and lead time are confirmed after product and market review.

openryd.com
